This entry will be dedicated to the topics of AutoCAD 2016, 2017 and newer versions. I will be presenting new methods to speed up creation and editing of 2D, 3D, Architectural and Mechanical drawings using AutoCAD. To create a 3D Drawing you must have a certain knowledge of CAD

and the 3D features. Therefore, I recommend you, to take a look at the previous articles in this tutorial series and first read AutoCAD basic and advanced concepts. AutoCAD 2016 and new features "AutoCAD 2017" is the sixth revision of AutoCAD and is the first release of the 2D and 3D version for Windows. AutoCAD 2017 introduced cloud-based technologies to improve your CAD workflow and eliminate the need to install and maintain your own copy of AutoCAD. Additionally, the

new release featured improvements to 2D and 3D modeling, editing, and tooling. 3D Modeling and Drawing There are several new 3D Modeling tools in AutoCAD 2017. Creation of 3D geometries has been significantly improved. 3D Boundary Select is a faster way to select 3D faces. 2D/3D Drawing Improvements To increase speed and improve workflow, some aspects of the 2D and 3D functions have been improved. AutoCAD sends and receives email messages from within the drawing

environment. All layers are displayed in the Layers Panel. When working on 2D drawings, an improved Grid can be used to separate different features. Improved editing tools in the 2D drawing environment. Better highlighting of features and improved grips are added to the 2D editing tools. The ability to customize the Zoom toolbar has been added. Objects can be dynamically placed in the drawing environment and automatically fit the space. New tools allow you to

create standard profiles, which are the defaults when opening files. Predictive features have been added to help you work more quickly. Designing and editing methods have been improved, such as connecting elements, creating surfaces, dynamic sizing, and editing geometry in the context of the ViewCube. User Experience improvements: New UI and features such as: The Dock System. You can now add any applications to the Dock. New Panel

Original programming in AutoLISP AutoLISP was an object oriented high-level programming language used for the development of add-on programs and AutoCAD macros. The AutoLISP language was developed and written by Dennis Taylor and released as an add-on for AutoCAD in 1991. In 1996, Autodesk licensed the AutoLISP language from Taylor. AutoLISP was then used as the basis for Visual LISP, a high-level scripting language for AutoCAD.

AutoLISP was a successor to
ACADAN. AutoLISP and Visual
LISP are superseded by Visual
Studio, but support for Visual
Studio can be added by compiling
AutoLISP to.NET assemblies.
AutoLISP's popularity continues on
the Internet, as some of the most-
visited web pages are made in
AutoLISP. Use of Visual LISP The
language was embedded in the
original AutoCAD and used for
many years, but was not the
primary object-oriented
programming language for

AutoCAD. Visual LISP was an object-oriented scripting language, based on AutoLISP. The language is based on: Object-oriented programming, that is, programming based on objects Command-driven programming (as opposed to procedure-driven programming). Variable-based programming Extension of AutoLISP's pattern matching to full path automation. Dynamic programming (to provide extension mechanisms to AutoLISP's commands) The Visual LISP language was introduced for

AutoCAD in 1992 as an add-on for VisualLISP for AutoCAD. The VisualLISP object scripting language was also introduced with AutoCAD in 1992. Both language products were discontinued in 1999, and the VisualLISP language was renamed Visual Studio (although Visual Studio is not an object-oriented language). AutoLISP is still available for use with AutoCAD today. The earlier, discontinued VisualLISP product is still supported in 2012 by AutoDesk. Autodesk also

developed a software development kit for Visual Studio (DevStudio) that provides Microsoft Visual Studio (Visual Studio.NET) from a command-driven programming environment. Command-driven programming in Visual LISP is executed as a set of series of AutoLISP commands. In order to execute commands, Visual LISP uses the syntax of: Visual L 5b5f913d15
